

(وربا ٹاسک) VerbaTask

# Run Your Shop by Talking

The Voice-First Commerce OS on WhatsApp — eliminating software friction for **2M+ micro-retailers** without apps, English literacy, or expensive hardware.

---

## Our Mission

Bridging cutting-edge artificial intelligence with the everyday reality of neighborhood retail. We don't build software that forces shopkeepers to change; we build intelligence that meets them where they already are.

---

## Our Philosophy

Zero friction, zero barrier to entry. If technology cannot be used by a traditional dukaandar on a busy Friday afternoon, it isn't ready for emerging markets. We are digitizing retail one voice note at a time.

## TECHNOLOGY FOUNDATION

# Powered by Alibaba Cloud & Qwen AI

Intelligence built on the Qwen ecosystem — the only LLM stack that natively understands how Pakistani shopkeepers actually speak.

### Core Partnership

Driven by Alibaba Cloud's high-performance **Qwen 2.5** large language models — enterprise-grade intelligence at micro-retailer scale.

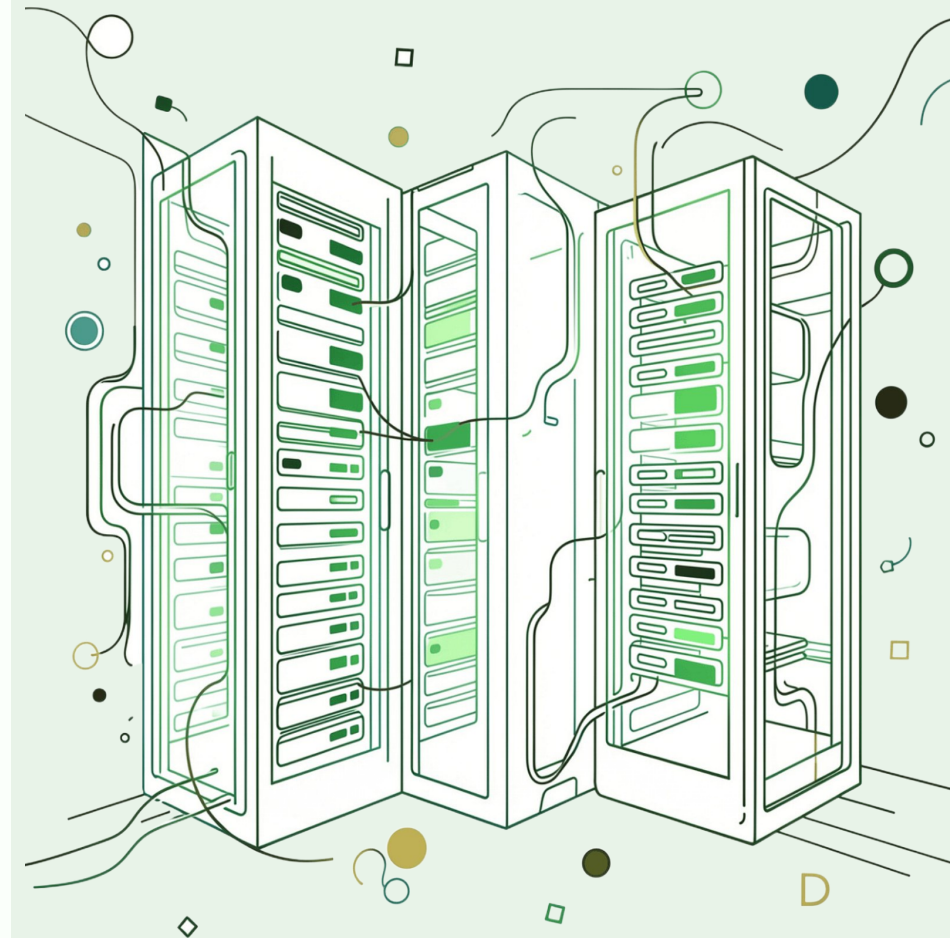

### Multilingual Dominance

Qwen natively deciphers **colloquial Pakistani Urdu, Roman Urdu idioms, and bazaar slang** where every generic model stumbles and fails.

### Enterprise Reliability

**Sub-second JSON entity extraction** and cloud scalability engineered for millions of high-frequency micro-transactions daily.

## THE PROBLEM — GROUND REALITY

# A Day in the Life of Tariq Bhai

Tariq Bhai runs a busy neighborhood kiriyana store handling **400+ transactions a day** across grains, cooking oils, and daily essentials. Customers are shouting orders. Delivery trucks are dropping cartons. Cash is changing hands constantly.

His entire business depends on a worn-out paper ledger — the "Khata" — prone to lost pages, math errors, and forgotten credit debts.

This is not an edge case. This is the daily operating reality for over **2 million shopkeepers** across Pakistan's urban and peri-urban markets.

1

### 400+ Daily Transactions

Grains, oils, essentials — all tracked by hand, all day long.

2

### The Khata Problem

Lost pages, arithmetic errors, and forgotten credit debts are not bugs — they are features of the paper system.

3

### Zero Digital Safety Net

No backup. No audit trail. No real-time visibility into what was sold, what is owed, or what is left in stock.

THE PROBLEM — WHY APPS FAIL

# The 3 Fatal Friction Points of Traditional Retail Apps

Every major POS and inventory app has tried to crack this market. Every one has failed for the same three reasons.

1

## Language & Literacy Trap

Complex POS apps are built in formal English with deep menus that shop assistants simply **cannot navigate**.

2

## The Hardware Tax

Desktop terminals, barcode guns, and thermal printers cost over **Rs. 80,000** — completely out of reach for small shops.

3

## Rush Hour Barrier

Nobody has time to unlock a tablet, search a catalogue, and type numbers while **customers are waiting**.

⊗ **The Result:** More than 85% of retail management apps get uninstalled within the first week of download.

## THE EPIPHANY

# Why Build an App When They Already **Live on WhatsApp?**

Shopkeepers spend **8 to 10 hours every day** on WhatsApp communicating with suppliers, family, and customers. The platform is already open. The habit is already formed. The trust is already there.

# 50M+

Active WhatsApp Users

In Pakistan alone — the platform is already the de facto communication OS for the entire merchant class.

# 8–10h

Daily Time on WhatsApp

Per shopkeeper — more time than any other app, tool, or platform in their daily workflow.

### Zero Friction Onboarding

If a merchant knows how to hold down the green WhatsApp microphone, they already know how to operate VerbaTask. Full stop.

### No Storage Penalty

Zero Play Store downloads. Zero phone storage consumed on entry-level Android devices that are already full.

THE SOLUTION

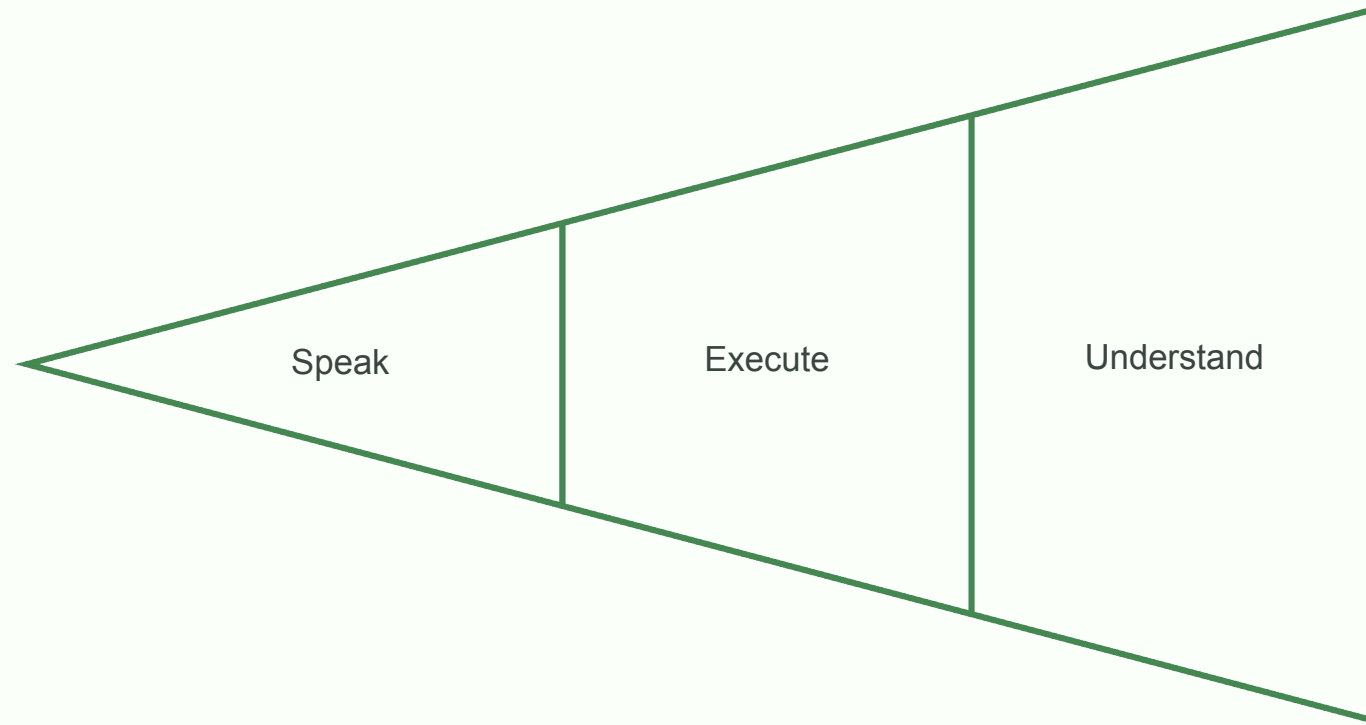

# Introducing VerbaTask — Your Voice-First Autonomous Back-Office

"2 mix mithai aur 5 kilo chawal cash pe bech diye."

That single spoken sentence — in colloquial Urdu, recorded as a WhatsApp voice note — is all it takes. VerbaTask handles everything else in under 2 seconds.

|                                                                                                                                                                      |                                                                                                                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Merchant Speaks</b></p> <p>A natural 3-second voice note in any mix of Urdu, Roman Urdu, or English. No formatting. No commands. Just talk.</p>                | <p><b>AI Understands</b></p> <p>Transcribes speech, identifies products across scripts, extracts quantities, rates, and payment method automatically.</p> |
| <p><b>System Executes</b></p> <p>Deducts inventory, records revenue, and replies with a digital receipt <b>and</b> a voice note confirmation — all in 2 seconds.</p> | <p><b>Dashboard Syncs</b></p> <p>Live web dashboard updates within <b>100ms</b> via WebSockets. No refresh. No delay. Always current.</p>                 |

## Under The Hood — Sub-Second Voice AI Pipeline

### High-Accuracy ASR

Groq-accelerated **Whisper-large-v3** captures authentic Perso-Arabic Urdu script in approximately **~400ms**.

### Zero-Shot Entity Parsing

**Qwen 2.5** structures unpunctuated spoken sentences into strict, validated JSON commands — no training data required per merchant.

### Humanized Voice-Out

Edge Neural TTS (**Uzma Neural**) replies in natural spoken Urdu so merchants can listen to confirmations completely hands-free.

### Full Stack

WhatsApp Cloud API → Whisper v3 → Qwen 2.5 → Edge TTS → **MongoDB & WebSockets**. Battle-tested. Production deployed.

# Breaking The Script Barrier — Cross-Lingual Phonetic Engine

## The Challenge

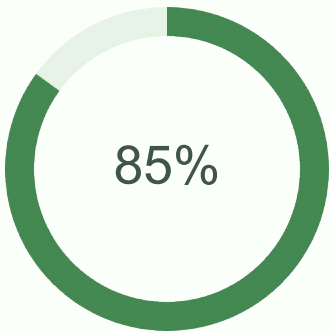

The inventory catalogue says **"Mix Mithai"** or **"Rice"**. The merchant speaks "مکس میٹھی" or types **"chawal"**. Three different representations. One product. Generic NLP fails every time.

### Real-World Misspellings VerbaTask Handles

- "sugr" → Sugar ✓
- "cheni" → Sugar ✓
- "oel" → Cooking Oil ✓
- "chawal" → Rice ✓

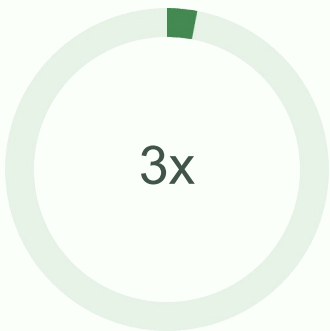

## The Solution

Custom bilingual dictionaries paired with **phonetic Levenshtein matching** bridge Urdu script, Roman Urdu, and English stock lists seamlessly — with no merchant training required.

Match Confidence

Even on street misspellings and phonetic approximations of product names.

Script Coverage

Urdu script, Roman Urdu, and English — all resolved to the same inventory item.

✓ Illiteracy-forgiving by design — the system meets the merchant where they are, not where a textbook says they should be.

## GUIDED FLOW & ZERO-TYPING CHECKOUT

# Tapping Instead of Talking

- Guided Order Menus

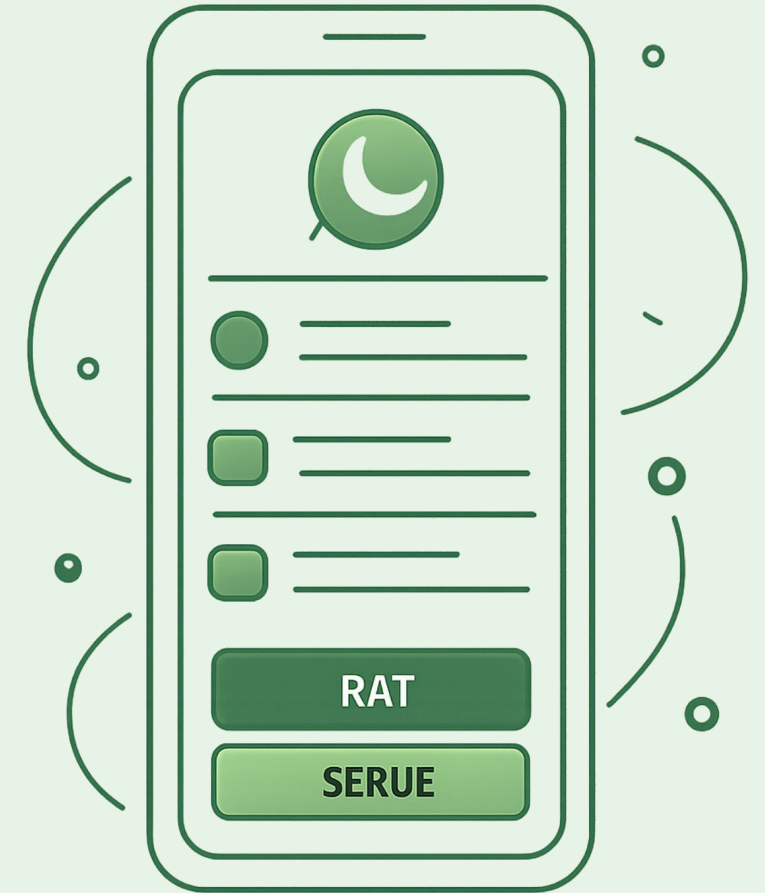

Merchants who prefer quiet environments can type "order" to trigger interactive, pageable WhatsApp stock lists.

- Instant Payment Pickers

Interactive quick-action buttons for Cash, EasyPaisa, and JazzCash finalize sales in one tap.

- Fault-Tolerant State

Atomic database updates guarantee that spotty 3G cellular connections never trap the merchant in broken loops.

## STRATEGIC ROADMAP

# What Comes Next

### Phase 1

**Live Today:** WhatsApp voice sales logging, live inventory decrements, instant PDF audit reports, and cross-lingual NLP.

### Phase 3

**Q4 2026:** Autonomous B2B replenishment—the AI automatically messages FMCG distributors when store inventory drops below minimum levels.

1

2

3

### Phase 2

**Q3 2026:** Bluetooth portable thermal receipt printing directly from WhatsApp, plus phone camera carton barcode scanning.

# Pricing & Accessibility

100% Free Forever for Every Retailer.

# PKR 0 / Month

Free Forever

Community Retail Tier — Zero Subscription. Zero Hidden Fees. Zero Barrier.

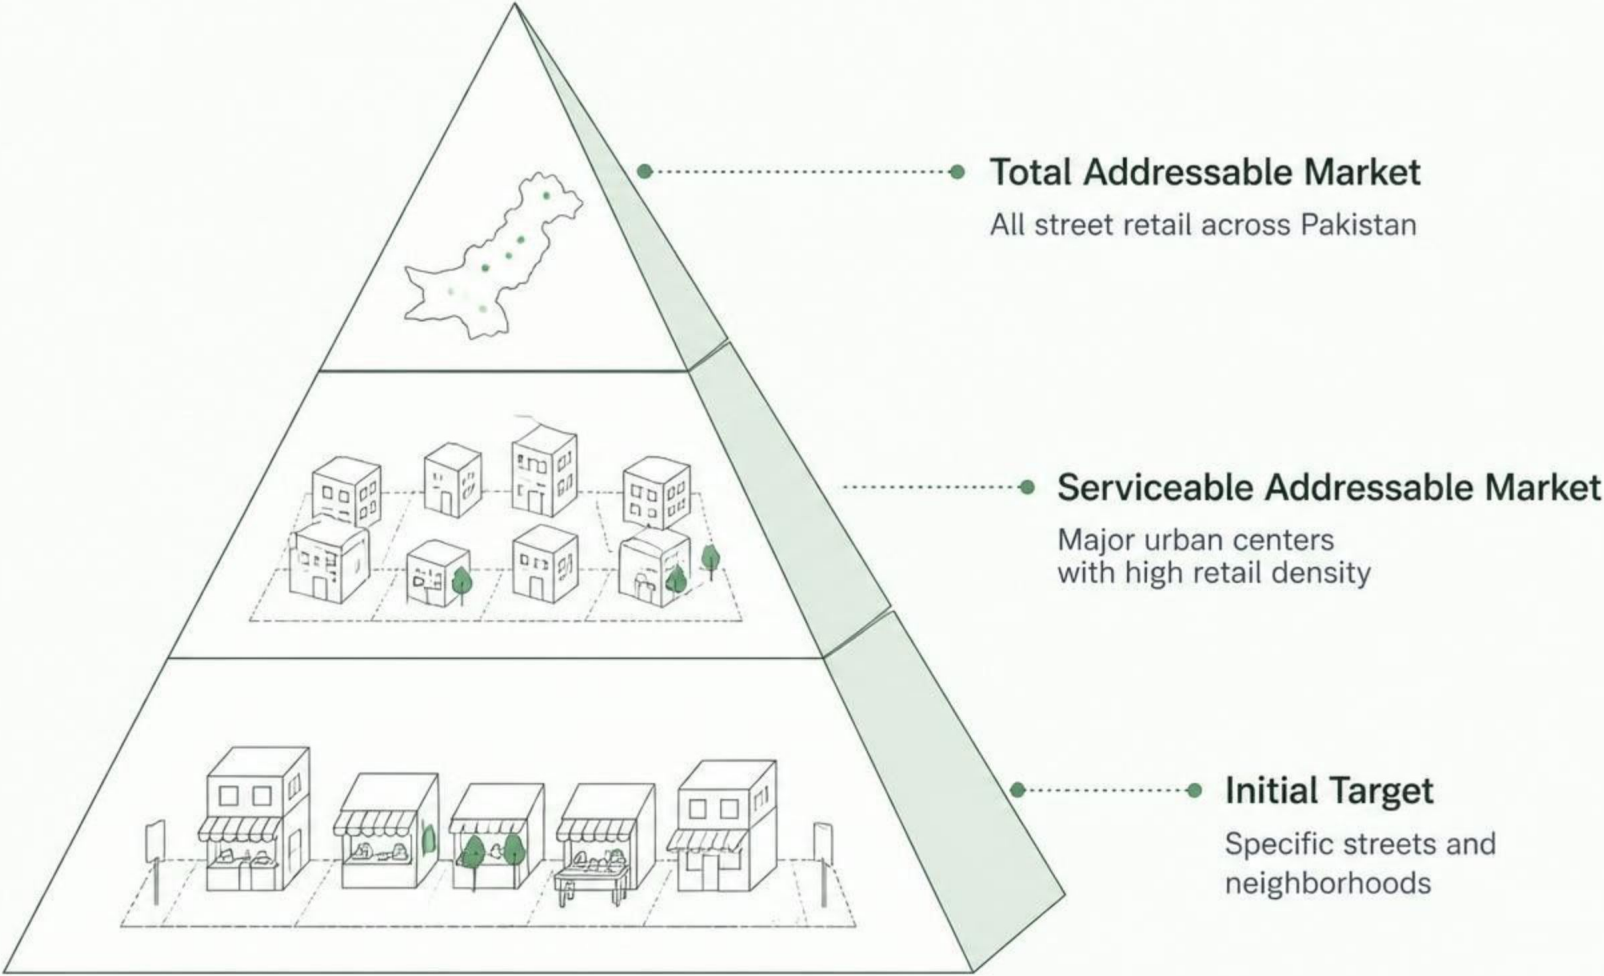

## ✦ Everything Included for Free:

- Unlimited Voice Commerce: Speak naturally in colloquial Urdu, Roman Urdu, or English to record sales in under 2 seconds.
- Autonomous Stock Tracking: Real-time inventory deduction with instant WhatsApp alerts before items run out of stock or expire.
- Pakistani Payment Reconciliation: Track Cash, EasyPaisa, JazzCash, Raast, SadaPay, NayaPay, and bank transfers without manual math.
- Instant WhatsApp PDF Audits: Download comprehensive, audit-ready daily sales ledgers and inventory summaries directly inside your chat.
- Live Web Dashboard: Instant WebSocket synchronization with full desktop and mobile access in Obsidian Dark and Crisp Light modes.

## ✦ Why It Costs PKR 0:

- Zero Cost to Dukaandars: Designed specifically for micro-retailers who cannot afford expensive software licenses.
- Built on Scalable Free Rails: Leverages Meta's free WhatsApp conversation quota and lightweight, sub-second AI inference so the platform stays free, sustainable, and accessible to Main Street merchants.

# Digitizing 2.2 Million Retailers

Initial Target (SOM)

10,000 FMCG and neighborhood kiriyana shops acquired through wholesale distributor partnerships and merchant referrals.

Serviceable Addressable Market (SAM)

BUILT FOR PAKISTANI COMMERCE & BANKING

# Native Integration with Local Financial Rails

VerbaTask is designed from the ground up to seamlessly integrate with Pakistan's unique commercial and banking ecosystem, ensuring full compatibility and easy reconciliation for merchants.

## Complete Payment Spectrum

Native reconciliation for Cash, Mobile Wallets (EasyPaisa, JazzCash), EMI's (SadaPay, NayaPay, Raast), and Commercial/Islamic Banks (Meezan, HBL).

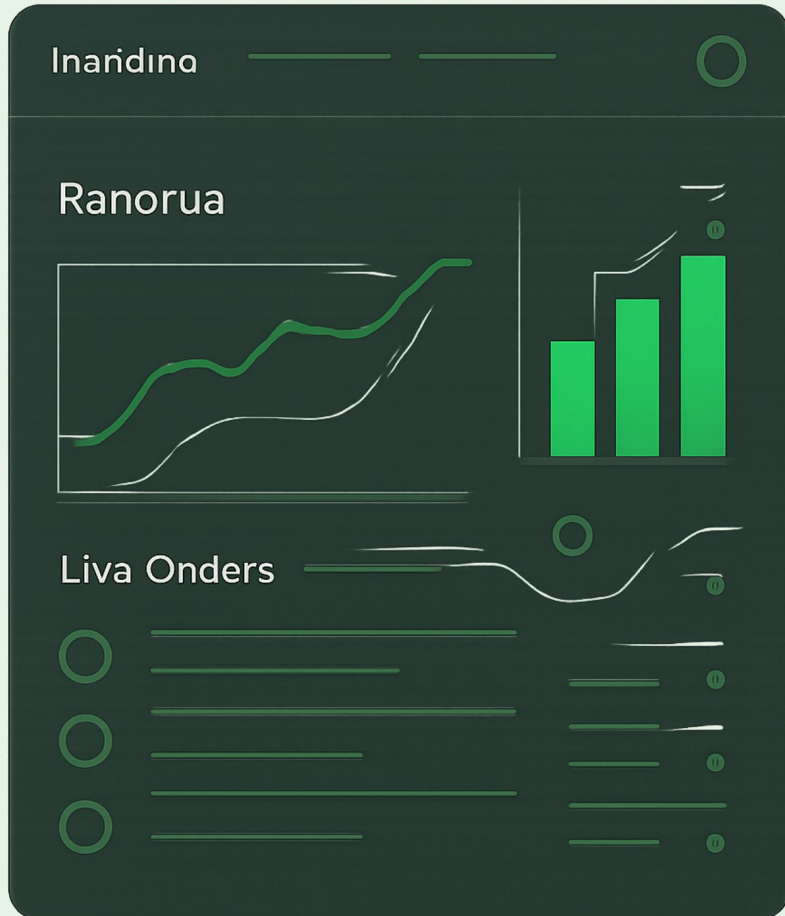

## Automatic Alias Matching

Resolves real payment terms like "saday pay pe aaya", "naqad mila", "meezan transfer", or "ایزی پیسہ".

## End-of-Day Balancing

Separates cash-in-drawer from digital receipts, eliminating cashflow mismatches.

## REAL-TIME WEB TELEMETRY

# The Live Dashboard & Instant PDF Audits

- Zero-Refresh WebSockets

Sales logged on WhatsApp appear on the live web dashboard in under 100 milliseconds.

- On-Demand WhatsApp PDFs

Merchants type "report" or say "sales report bhejo" to receive audit-ready, formatted PDF ledgers directly in their chat.

- Responsive Modern UI

Built with React 19, Tailwind CSS, and Obsidian Dark/Light modes for smooth operation on phones, tablets, or laptops.

## BUSINESS PROTECTION & SAFETY GUARDRAILS

# Spoken Automations and Fraud Defense

- Spoken Workflow Creator

Merchants set active store alerts simply by talking: "Jab doodh 5 carton se kam ho toh mujhe alert karo."

- High-Value Fraud Guard

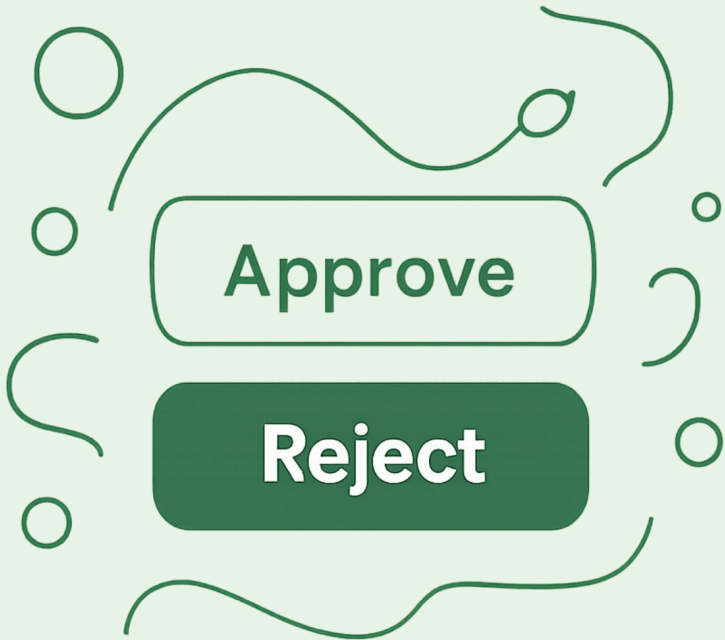

Orders exceeding customizable thresholds (e.g. Rs. 10,000) pause automatically, requiring explicit WhatsApp button approval.

- Expiry Date Radar

Automated alerts notify merchants days before perishables expire, saving stock from going to waste.

PRODUCTION READY

# Battle-Tested & Live in Production

VerbaTask is not a prototype. It is not a demo. It is a fully deployed, production-grade system with real infrastructure, real test coverage, and real merchant-facing endpoints running today.

## 61

### Automated Tests

End-to-end test suite covering voice parsing, entity extraction, inventory sync, and receipt generation.

## <1s

### End-to-End Latency

From voice note received to receipt delivered — sub-second on production infrastructure.

### Frontend

verba-task.netlify.app — live merchant dashboard with real-time WebSocket sync.

### Backend API

verbatask-production.up.railway.app — production Railway deployment handling live WhatsApp webhook traffic.

### Payments Ready

EasyPaisa, JazzCash, Meezan Bank, HBL — Pakistan's full digital payment stack integrated and mapped.

☑ Ready to scale. Ready to partner. Ready to put a voice-first commerce OS in the hands of every dukaandar in Pakistan. — [verbatask.business@gmail.com](mailto:verbatask.business@gmail.com)
